

Project Design Phase-I

Solution Architecture

Project Name: Natural Disaster Intensity Analysis and Classification Using
Artificial Intelligence

Team ID : PNT2022TMID26880

Date : 05/10/2022

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to: ' Find the best tech solution to solve existing business problems. ' Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders. ' Define features, development phases, and solution requirements. ' Provide specifications according to which the solution is defined, managed, and delivered.
